Dynasylan® silanes in silicones—overview and application fields

Technologies:
- RTV-silicones (alcoxy, oxime)
- 2K Pt-catalyzed
- HTV
- LSR

- Low volatile, spidery adhesion promoter for high temperature applications
  - VPS 7161
- Special/ Superior, less yellowing adhesion promoter for glass, metals and diverse plastics
  - Dynasylan® 1146
- Suitable silane for peroxide- and Pt-curable silicones as well as co-crosslinker for RTV silicones
  - Dynasylan® 6490
- Crosslinkers with tailored reactivities and curing potentials
  - Dynasylan® 40 AP BTSE
- Traditional aminofunctional adhesion promoters for standard substrates
  - Dynasylan® TRIAMO AMEO DAMO
- High-efficient hydrophobizing agent for in-situ filler (silica) treatment
  - Dynasylan® HMDS
